**Battery 'Energize by' Date Extension**

Valued customer,

We are pleased to inform you that Enphase Energy is extending the 'Energize by' date of all our battery products from 12 months to 18 months without any additional cost. As you are aware, all battery products have a date by when they must be installed and commissioned, or re-energized, to avoid deep discharging (exhausting the capacity) of the battery. This extension will automatically apply to all batteries in your existing inventory with an original 12 month Energize by date.

We believe that taking this measure will provide you with more flexibility in your inventory management and installation timelines.

How will you know to which batteries the extension applies?

- All Batteries with an Energize by date earlier than **August 8<sup>th</sup>, 2024** are automatically extended by 6 months. This letter serves as a formal confirmation of such extension.
- All batteries with an Energize by date label of **August 8<sup>th</sup>, 2024** or later already have the correct label with an 18 month Energize by date.

Please refer to the photo below for where to locate the "Energize by" label and date.

Thank you for being a valued customer of Enphase.

Best Regards
