novotegra side-fix

novotegra side-fix – insertion system with modules installed in portrait

### Powerful, stable and attractive!

High quality and well designed to the last detail: With our new roof hook and the insertion system you can fix your photovoltaic system safely and stably on your tiled roof. No matter if landscape or portrait module mounting, bright aluminium or black anodized, with novotegra you make the right choice!

The design of the roof hook ensures a safe installation even with large tile coverings of up to approx. 11 cm. In combination with the new C-N-rail and our proven insertion rail the installation is quick and easy. The C-N rail combines the advantages of our reliable module mounting rails – namely the laterally height-adjustable connection to the roof hook and the use of the rail as a cable channel.

The insertion rail is fixed with the pre-assembled cross rail connector set. The modules are held tension-free and floating in the insertion rails, which are available in bright aluminium or black anodised, depending on the colour of the module frame.

You get a homogeneous, attractive appearance of your system with a unitary construction that you can mount quickly and easily, thanks to well-known components made of durable, corrosion-free materials that can be used across all novotegra pitched roof systems. All components are made of durable, corrosion-free materials.

### Your benefits

- Quick roof hook installation through click technology
- Attractive and unmistakable appearance
- Floating and tension-free module installation
- Roof hooks for large tile overlap up to approx. 11 cm
- Easy to assemble connection from the side
- Internal connector for maximum assembly freedom
- Easy to assemble due to pre-assembled components
- High manufacturing quality and durability
- Simple, Eurocode-compliant layout with our Solar-Planit online tool
